

BRIDGE POSTING

The concrete Lisbon Center Bridge that carries Mill Street over the Sabattus River in Lisbon is being posted with a maximum weight limit of 25 tons. All vehicles heavier than the posted limit that need to travel from one end of Mill Street to the other should use Lisbon Street and Upland Road as an alternative route. At this weight limit, vehicles such as loaded dump trucks, concrete trucks and logging trucks will not be able to use the bridge. Cars, pickup trucks, school buses, and emergency vehicles will still be able to cross. The structure is programmed for replacement in 2017/18.

MaineDOT regrets this inconvenience and encourages motorists to drive safely.
